

Colors

Create colors with various degrees of transparency, which can be added to your material selection.

The customer will see their object modeled in the color configuration.

1

Select the "Color" section from the side menu.

Here you can add or edit the colors, used for materials. That way you don't have to create them every time you add a new material.

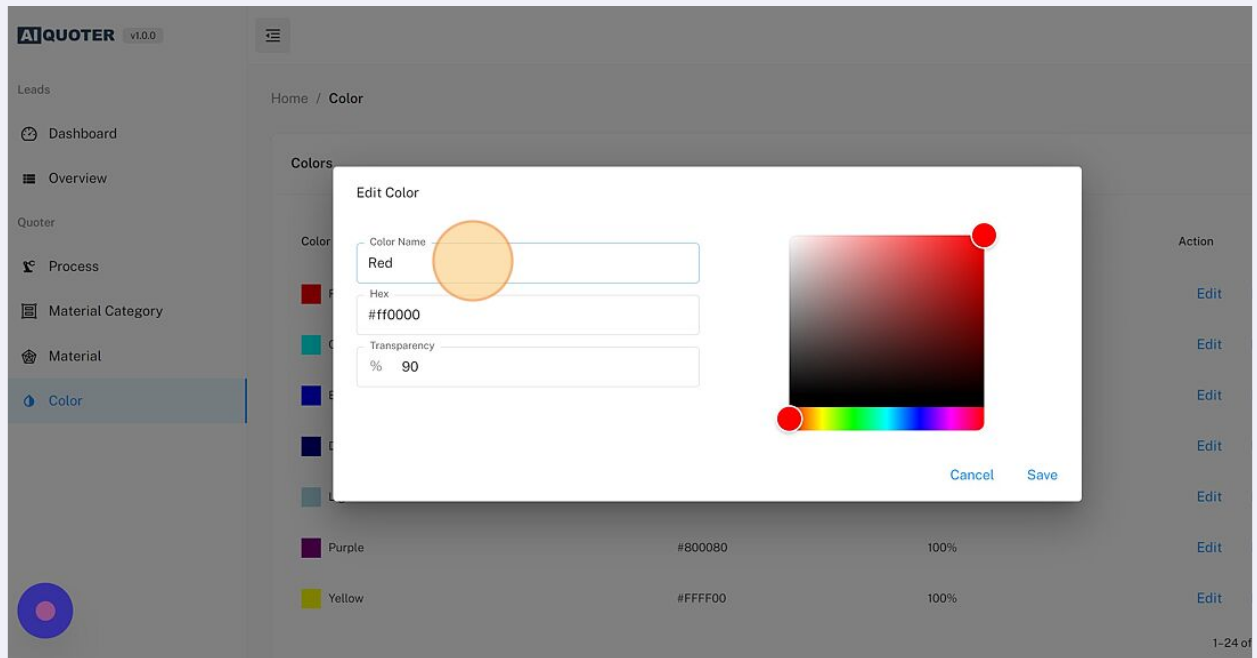

The screenshot shows the 'AI QUOTER v1.0.0' application interface. On the left is a sidebar with navigation items: Leads, Dashboard, Overview, Quoter, Process, Material Category, Material, and Color (highlighted). The main area shows 'Home / Color' with a '+ Add' button. Below is a table of colors:

Color name	Hex	Transparency	Action
Red	#F00000	90%	Edit Delete
Cyan	#00FFFF	100%	Edit Delete
Blue	#0000FF	100%	Edit Delete
Dark Blue	#00008B	100%	Edit Delete
Light Blue	#ADD8E6	100%	Edit Delete
Purple	#800080	100%	Edit Delete
Yellow	#FFFF00	100%	Edit Delete

The 'Edit' link in the 'Action' column for the 'Red' row is circled in orange. At the bottom right, it shows '1-24 of 24' with navigation arrows.

2

This field will pop up, whether you edit or add a new color. Enter your color name and select the color you wish. Either you use the color HEX code or you can use the color picker on the right. Transparency shows how transparent the 3D object appears.

3

Click "Save" to save the color changes. It can now be used in your material setup.
